

Epignosis - PHP developer assignment

Implementations:

1. Index.php page
2. Login form (use "maria" or "mainsys" for both username and password to log in as an employee or an administrator correspondingly)
3. Register form (problem with transferring data to database)
4. Account page for employee, which shows their past applications, sorted by submission date and has a "submit request" button, which leads to the submissionform.php page (did not implement the data transfer)
5. Account page for administrator, which shows a list of existing users and has a "create a user" button which leads to the usercreationform.php page (did not implement the data transfer).

Settings:

```
$mysql_hostname = "localhost";
```

```
$mysql_user = "root";
```

```
$mysql_password = "";
```

```
$mysql_database = "vacationHR";
```
